

# iBEAM CONSTRUCTION CAMERAS

## iBEAM® OnSite PTZ™ Construction Camera INSTALLATION INSTRUCTIONS

### Getting Started

Remove all components from shipping box.

Loosen screws and open camera enclosure.

Remove packing material. (Save packing material for camera storage or return shipping.)

Close camera enclosure and tighten screws.

### Install the Camera

Attach camera enclosure to mounting surface.

#### *Pole:*

- Strap camera bracket to pole (see detail below) and attach lower two 3/8" bolts.
- Align and slide the camera enclosure's lower keyhole slots on 3/8" bolt heads.
- Thread two 3/8" bolts through upper holes on camera enclosure and mounting bracket.

#### *Wall:*

- Attach camera enclosure directly to wall using lag bolts (not included).

Connect the camera to your modem/router using a CAT 5(3) network

Plug the camera enclosure into 120V AC power.

### Configure your Network

Your network must be configured to allow outside traffic to the camera. The most common method for this is to use port forwarding on your network's router to forward all outside requests on port 80 to the camera's network IP address. See other side for the camera's network IP addresses.

**When your camera is properly installed, you will be able to view the live video here:**

**<http://www.ibeamsystems.com/private/>**

**Call the iBEAM Support Team at 1.800.403.0688 to verify installation  
and to set your camera views.**
